Barco Sets Up Flagship Reference Site in a Major Belgian Hospital

April 29, 2009 – Barco is expanding its clinical collaborator network with a brand-new customer reference site at the Dienst Medische Beeldvorming, the radiology practice serving the General Hospital Group AZ Groeninge in Kortrijk, Belgium.

With this initiative, Barco aims to intensify its cooperation with the clinical end-user community. As a global reference site, the Dienst Medische Beeldvorming (Medical Imaging Department) has been equipped with the very latest in diagnostic display technology, including the first 6 MegaPixel color display system for diagnostic imaging. In addition, the department has rolled out Barco's MediCal QAWeb solution for intervention-free calibration, Quality Assurance and asset management throughout the enterprise. The program will carry on when the AZ Groeninge Hospital, along with the Dienst Medische Beeldvorming, will move to a brand-new facility on the outskirts of the city of Kortrijk, a stone's throw away from Barco's headquarters.

The Dienst Medische Beeldvorming at AZ Groeninge is a long-standing Barco customer and has been using Coronis 2MP, 3MP and 5MP Mammo monitors throughout its radiology department for several years. As a Barco reference site, they will now also deploy the innovative Coronis Fusion 6MP DL display system in their reading rooms, where radiologists routinely read multiple (color and grayscale, moving and static) images from advanced modalities such as X-ray, CT, MRI, PET-CT, US and angiography.

Dr. Patrick Seynaeve, head of radiology at the AZ Groeninge Hospital, praised the new Barco 6 MegaPixel diagnostic displays: "We make life critical decisions every day. The multi-modality Coronis Fusion 6MP DL display system will provide us with the best image quality available and increases our diagnostic confidence."
